

1. Error launching SATWIN on Windows NT, 2000, or XP when logged in as a "User"

If SATWIN is launched on Windows NT, 2000, or XP machines when logged in as a "User" (instead of "Administrator"), the following error could occur:

"Run-time error 75 - Path/File access error"

SATWIN usually creates ASCII text files during its operation; consequently, it needs to be able to write to the hard disk. However, user accounts on XP machines are normally created without write-access for programs such as SATWIN.

To address this problem the administrator should provide write-access to the folder where SATWIN is installed as well as to all "Working Folders".
